

1. Policies on Security

At Erhardt, we understand security to be an integral process, which should include a risk analysis to ensure that each threat is managed using the appropriate resources for putting in place mitigation mechanisms designed to reduce such risks.

Hence the reason we document, implement, maintain and continuously improve our security procedures, introducing the necessary measures to be adopted in each case.

Policy on Physical Safety

The effective supervision of physical safety should involve the application of protection measures designed to prevent unauthorised accesses to its facilities.

Erhardt has therefore decided to implement, amongst other safety measures, a procedure for controlling access to its facilities that affects employees, suppliers, visitors and vehicles.

Policy on Data Security

Information in knowledge-based societies is a strategic asset for organisations.

At Erhardt, we recognise the importance of identifying and protecting our data assets, avoiding the destruction, disclosure, alteration or unauthorised use of any information related to clients, suppliers, employees, strategy, management, or any other concept.

We therefore pledge to protect Erhardt's data resources and the technology used for their processing from deliberate or accidental internal or external threats in order to ensure the confidentiality, integrity, availability, legality and reliability of the information.

Policy on Personal Data Protection

We undertake to treat the personal data we have access to in a due and proper manner.

Anyone with access to personal data is required to comply with the provision of the security document (which contains the technical and organisational measures to be adopted pursuant to current legislation).

Whomsoever wishes may exercise the rights to which they are entitled by virtue of the law on personal data, as provided for in the data processing procedures under our responsibility.

Policy on Supply Chain Security

Our priority at Erhardt is to create the best solutions for each client, seeking secure and efficient supply chains. We consider, plan and organise what we do.
